Detailed Subject Analysis

Computer Organization and Application (COA)

Frequency Question

1 explain structural hazard with if/mem conflict.

1 pipelining stall example please.

1 risc vs cisc in simple terms.

1 frame a story about computer architecture.

1 mse 2 question 3a explanation.

1 explain binary number system in simple terms.

1 convert 101101 to decimal and explain steps.

1 what is conditional execution in arm?

Query Category Examples

Category	Examples
Exam Preparation	Pipelining stall example please., MSE 2 question 3a explanation.
Content Summarization	Summarize page 3 about binary number system.
Simplification Requests	RISC vs CISC in simple terms., Frame a story about computer architecture.
Concept Explanation	Explain structural hazard with IF/MEM conflict., Convert 101101 to decimal a

STUDENT ANALYSIS

Students focus more on foundational topics than deeper architectural concepts.

Final Recommendation for Teachers

1. Revisit basics: binary systems and condition codes using quick revision quizzes.
2. Improve conceptual clarity with visuals, analogies, and storytelling.
3. Reinforce pipeline execution with animated step-through timelines (IF/MEM stalls).
4. Compare RISC vs CISC using real-world CPU examples (ARM vs Intel).
